SAN FRANCISCO SHERIFF'S OFFICE LAUNCHES NEW ONLINE PUBLIC DASHBOARD SHOWCASING RESET CENTER STATISTICS

New dashboard provides real-time insights into RESET'S Impact on Public Safety and Recovery

SAN FRANCISCO, CA. — The San Francisco Sheriff's Office today launched a new public dashboard that gives residents an up-to-date look at the performance of the Sheriff's Office RESET Center, a first-of-its-kind crisis stabilization center providing an alternative to jail or emergency departments for individuals arrested for public intoxication or substance use.

"One of the most encouraging outcomes we've seen is how quickly law enforcement officers are able to transfer individuals into clinical care and return to serving their communities," said **Sheriff Paul Miyamoto**. "At the same time, people in crisis are receiving several hours of medical and behavioral health support in a setting designed for recovery. That time gives clinicians the opportunity to stabilize individuals, build trust, and connect them with services that can make a lasting difference. Those are meaningful results, and we're proud to share them with the public."

"We launched the RESET Center to take a new approach to the drug crisis—one that holds people accountable while giving those struggling with addiction a real path to recovery," said **Mayor Lurie**. "With this public dashboard, we are providing transparency with results and welcoming accountability so we can improve where we can, and build on what's working to get people off the streets and into stability. Our administration will continue to deliver the safe, clean streets San Franciscans deserve."

Available now at www.sfsheriff.com under the RESET Center webpage, the dashboard provides regularly updated data on the Center's operations and outcomes. Since opening on May 4, 2026, the RESET (Rapid Enforcement, Support, Evaluation, and Triage) Center has continued to demonstrate its effectiveness as an innovative public safety and public health partnership.

The dashboard includes demographic information on individuals served, including age, race/ethnicity, and gender, along with summaries of admissions, completed stays, referrals to care, and operational performance.

One of the dashboard's most significant performance measures is the average RESET transfer time. Law enforcement officers spend approximately five minutes transferring an individual into RESET's care before returning to patrol. Prior to the opening of the RESET Center, officers frequently spent hours

waiting in emergency departments or processing arrests at jail before they could return to service. The dramatic reduction in wait time means officers and deputies can get back into their communities faster while individuals in crisis receive immediate clinical care.

The data also shows clients remain at RESET for an average of more than eight hours, providing substantially more time for stabilization, observation, and engagement with clinical staff than they would typically receive in jail. This extended period of care creates greater opportunities to build trust, address immediate needs, and connect individuals with longer-term treatment and support services.

“DPH’s role is to help ensure people struggling with substance use disorder at the RESET Center have every opportunity to connect and be guided toward treatment and services,” said **Dan Tsai, SFDPH Director of Health**. “We are encouraged by the percentage of people who have raised their hand to be connected to treatment and we will continue to partner with the Sheriff, our community healthcare partners and others to successfully connect people to care.”

The RESET Center operates through a partnership between the **San Francisco Sheriff’s Office, the San Francisco Department of Public Health, and Connections Health Solutions**. The Center accepts individuals brought by law enforcement who meet established eligibility criteria and provides medical evaluation, behavioral health services, observation, stabilization, and connections to ongoing care.

The public dashboard will be updated regularly, allowing residents, policymakers, community partners, and the media to monitor the Center's performance as the program continues to grow.

Current dashboard data (as of 3pm 7/7/26) shows the following averages since the Center’s opening:

- **938 arrivals**
- **887 admissions (95% admission rate)**
- **825 completed stays**
- **Approximately 30.7% of admitted clients who consented to treatment, recovery, housing or other support services**
- **Average officer RESET transfer time: 5 minutes**
Average client stay: 8 hours, 4 minutes
